

IT, CLOUD & CYBERSECURITY AUDITING 2026

21 - 24 September 2026 | Sheraton Imperial Hotel Kuala Lumpur

Master the art of IT, cloud, and cybersecurity auditing in this intensive 4-day, hands-on program. Move beyond theory with guided labs covering network security testing, cloud configuration reviews, and automated assessments across AWS, Azure, and GCP. Learn to scope risk-based audits, and write findings that drive real change. Walk away ready to build and run a repeatable, end-to-end audit program.

Abhinav Mishra is an Application Security Researcher with over 13 years of experience in penetration testing across web, mobile, and infrastructure. He is the founder of ENCIPHERS, where he leads offensive security projects, including penetration testing, red teaming, and specialized training programs. Abhinav has trained security professionals globally on web, mobile, infrastructure, and AI-driven application hacking, bringing real-world insights and hands-on experience to his sessions

Benefit of Attending :

- **Audit confidently across IT and all three major clouds:** Gain practical command of leading frameworks and cloud security on AWS, Azure, and GCP, equipping you to scope, test, and evaluate controls in any environment.
- **Walk away with deliverables you can use immediately:** From writing effective findings to building a repeatable audit program, you finish the capstone with the templates, techniques, and confidence to run end-to-end audits from day one.
- **Learn by doing, not just watching:** Multiple guided hands-on labs let you scan networks, exploit misconfigurations, audit IAM policies, and assess live cloud environments, so you build real, job-ready skills rather than theoretical knowledge.
